

Link Builder PRO

User Manual

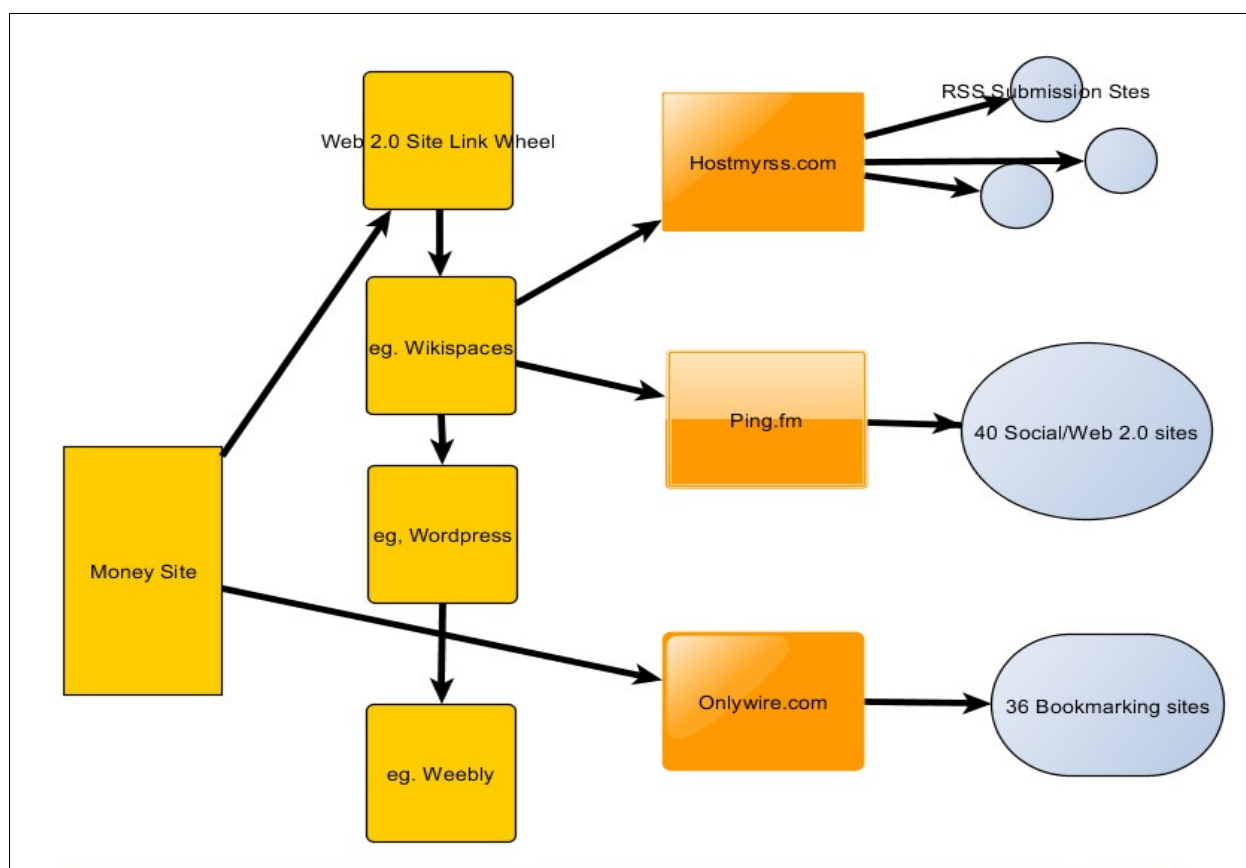

Link Builder PRO (LBP) has been developed to automatically create account and posting your articles on top web 2.0 properties and save the subsequent url's of each new site. Then it will submit those new url's to RSS Feed directories, Submit the url's to 40+ Social Network sites via Ping.fm and LBP will also bookmark any website URL to over 30 Bookmark sites via OnlyWire.com. This will help get them indexed and ranked. Not only that, the LBP Profile Link Builder will help you to create hundreds of High PR profile links automatically.

Before starting, let me explain with diagrams, how Link Builder Pro works. Below is a diagram showing how Link Builder Pro submits your Links. By including a link to your money (or target site) within the articles that you write, you will get a link on the Web 2.0 sites that you create using Link Builder Pro. The URL's of those newly created Web 2.0 sites are then submitted to 2 'dispersal services'.

Using the URL's of the newly created sites Link Builder Pro will get one RSS feed created at Hostmyrss and take that Feed and submit it to the RSS directories listed in the Link Booster tab. Then it will send the Web 2.0 URL's to Ping.fm which in turn will submit those same URL's to up to 40 plus social sites/web 2.0 sites that you have accounts with.

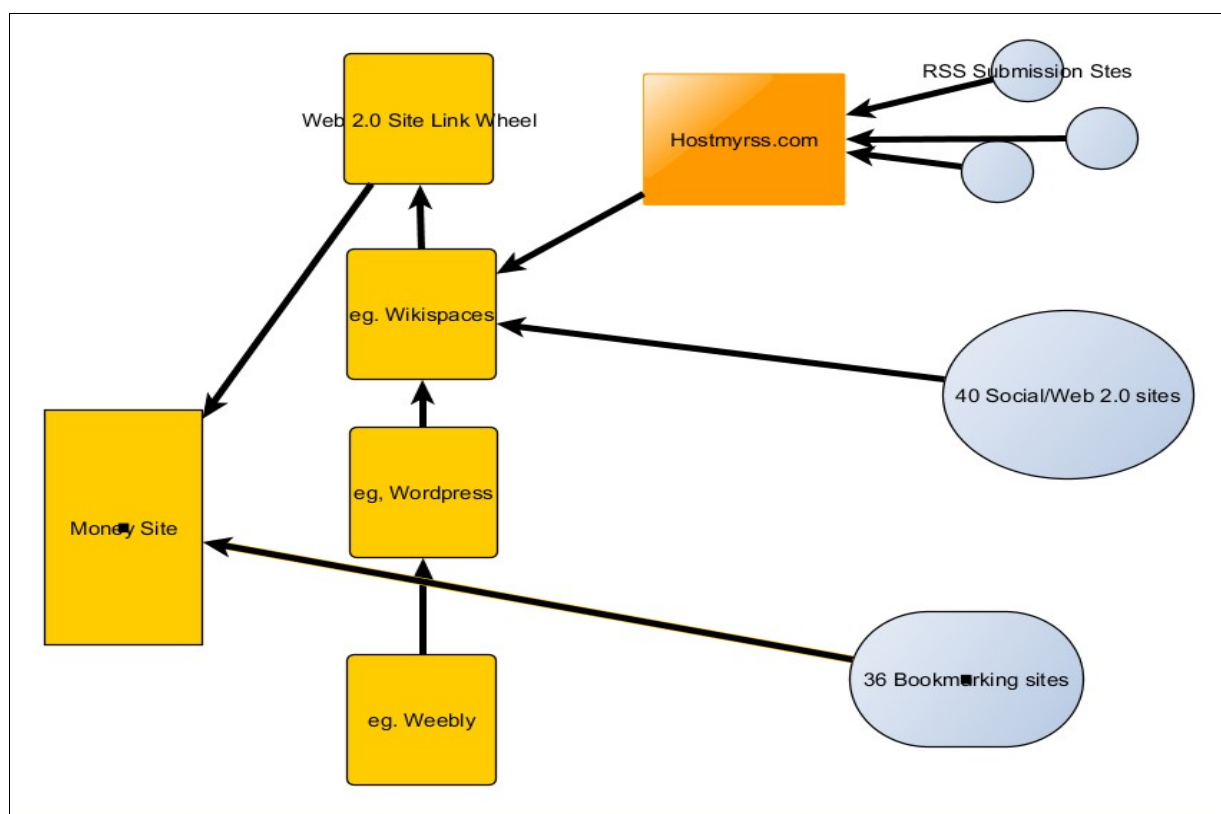

In the Bookmarking Module, Link Builder Pro will send your website URL to Onlywire, the automated bookmarking service, which in turn will submit those URL's to all the accounts you have set up with Onlywire.

Note: To keep the diagram simple, it shows how the submissions work from one Web 2.0 site in the Link Wheel (Open Link Wheel in this case), but in fact you will be submitting the URL's of all the Web 2.0 sites that you just created.

Once the submission is complete you will have links pointing back from the RSS feed submission sites and 40 Social/web 2.0 sites to the Web 2.0 sites you created earlier. These will be linking either to each other to create a Link Wheel or directly to your money site which can be your blog, website, affiliate offer, opt in page, etc. Additionally, you will have bookmarks on 30+ Bookmarking sites with links pointing to your money site.

Below is a diagram showing the direction your new links are pointing. The example shows details of links automatically acquired pointing to just one Web 2.0 property, plus the Bookmarks to your money site.

Before you install Link Builder PRO, please check the following items:

Internet Explorer Settings:

Please enable programmatic clipboard access, here's how: Click Tools → Internet Options → Security → Custom Level → Scripting → Allow Programmatic Clipboard Access → Enable.

64 Bit OS:

If you are using a 64 bit OS, please download the new decaptcher.dll from here (you must replace the old ones):

<http://www.linkbuilder-pro.com/decaptcherdll.zip>

Win 7 & Vista User:

Please right click and select 'Run as Administrator' when running the program.

Internet Explorer and .NET Framework:

This software requires the latest version of IE and .NET Framework,

[Download IE 8 Here!](#)

[Download .NET Framework Here!](#)

Antivirus Warning:

Don't panic if you get an antivirus warning when you are trying to run this program. It is from decaptcher.dll (for automatic captcha solving purpose). Just click 'add to exception' when you get that warning. This program is 100% virus-free!

IMPORTANT: Do not click 'ignore' in your AV program. But click 'add to exception' or you will get errors when running the program. It is different for each AV program, you can 'google' it for further instruction.

If You Get RPC Error:

- Make sure to NOT close the IE window when the program is running.
- If you're using Vista/7, please right click and select 'Run as Admin'.
- Did you use a firewall? Make sure to allow the connection for this program.
- This may be caused because you're using a Non-English windows.
- Please see [this article](#).

Improving Success Rates:

1. Please run [CCleaner](#) before using this software.
2. Please install a fresh IE 8 and remove any 3rd party add-ons.
3. Use a US proxy or VPN.

If Your IP Is Not From US:

You won't get a high success rate if your IP is not from US (because some web 2.0 properties have different layout, etc). Please use a US proxy to solve this issue: <http://www.yourprivateproxy.com/>

Resetting Your License:

If you want to install this software on another computer, you must reset your license here: http://www.linkbuilder-pro.com/reset_license.php

Initial Setup Instructions:

Step 1:

Download the program from here:

<http://www.linkbuilder-pro.com/>

Step 2:

Extract and double-click the **LBP Link Wheel Builder .exe** to start the program (The Blue square with a white 'L'). Note: DO NOT close the IE browser or you will get an error.

Step 3:

Fill in your login details if you have ordered the FULL version of the software or just click **Free Trial** to test the trial version of the software.

Step 4:

Click the **Config** tab.

The screenshot shows the 'Config' tab of the 'LBP LinkWheel Builder V.2.2.1 PRO Version' application. The window has a blue title bar and a yellow border. The 'Config' tab is selected, showing various settings sections. At the bottom, there are three yellow buttons: '1. Register Websites', '2. Email Verification', and '3. Submit Articles'. A 'Skip' button is also present.

User Name: Password: Auto Generate

RSS Setting

hostmyrss.com ping.fm user key onlywire.com Save Changes

Skip Stop 1. Register Websites 2. Email Verification 3. Submit Articles

In the **Websites Registration Info** area you MUST fill in a user name and a password. You can click the **Auto Generate** button to automatically generate the user name and password. (This is used for registering websites, so make sure the user name is unique). User name can not contain any spaces. Passwords should only use numbers and letters. No fancy characters.

In the **Proxy Info** area: If you want to use a proxy then you must fill in the required fields in the **Proxy Info** area. Fill the **IP** field with your proxy IP address (the format is ip:port). If you are using private proxies you must also fill in the **Username** and the **Password** field. Note: It only support http proxies at the moment.

Note: If you're using proxies from yourprivateproxy.com you don't need to fill the user name and password.

In the **Preferences** area click **Use Proxies** if you have decided to use proxies in this program. Click **Display Error Details** to display the details of any error in the Log tab (recommended) and finally set the program timeout in the **Timeout** field (60-120 is recommended, depending on your connection speed).

In the **Captcha Service** area you can select how to solve the captchas using 3 different options:

Select the **Manual Captcha** option if you want to enter the captchas manually. Select **Decaptcher** (\$2 per 1000 captcha, more info at decaptcher.com) and fill in the required details to use the decaptcher captcha solving service. Select **Death By Captcha** (\$1.75 per 1000 captcha, more info at deathbycaptcha.com) and fill in the required details to use deathbycaptcha captcha solving service.

Note: Death By Captcha is very slow at the moment. Please use Decaptcher or Manual captcha for maximum success rate.

To use the RSS, Ping and Bookmarking modules, in the **RSS Setting** area enter your additional details for:

Hostmyrss.com (for RSS Submission functionality) username and password.

Ping.fm (for Link Booster functionality) user key.

Onlywire.com (for Social Bookmark functionality) username and password.

Place the HostMyRSS and OnlyWire usernames in the boxes on the left and passwords in the boxes on the right. The Ping.fm user key goes in the long box.

Note: [Click here](#) to get your Ping.fm user key.

Additional Note: You must create HostMyRSS, OnlyWire and Ping.fm accounts manually, but you can buy them from [here](#) if you are too lazy to do it manually.

Click **Save Changes!**

Step 5:

Click the **Email** tab.

Pop3 Server Name: pop.mail.yahoo.co.uk
Pop3 Port: 995
☒ Pop3 SSL

Skip Stop 1. Register Websites 2. Email Verification 3. Submit Articles

Click the **Generate Random Email Details** button and then click the **Auto Create Yahoo Email** button to automatically create a yahoo email account.

Important: Please watch the Logs tab when you're creating the Yahoo email account. Make sure that there's no error message in there. You must restart the account creation process if there's an error!

You can also use **Gmail** or **Your Own Domain POP3** email address. **Note:** you'll need to enter the POP3 information manually if you choose this option.

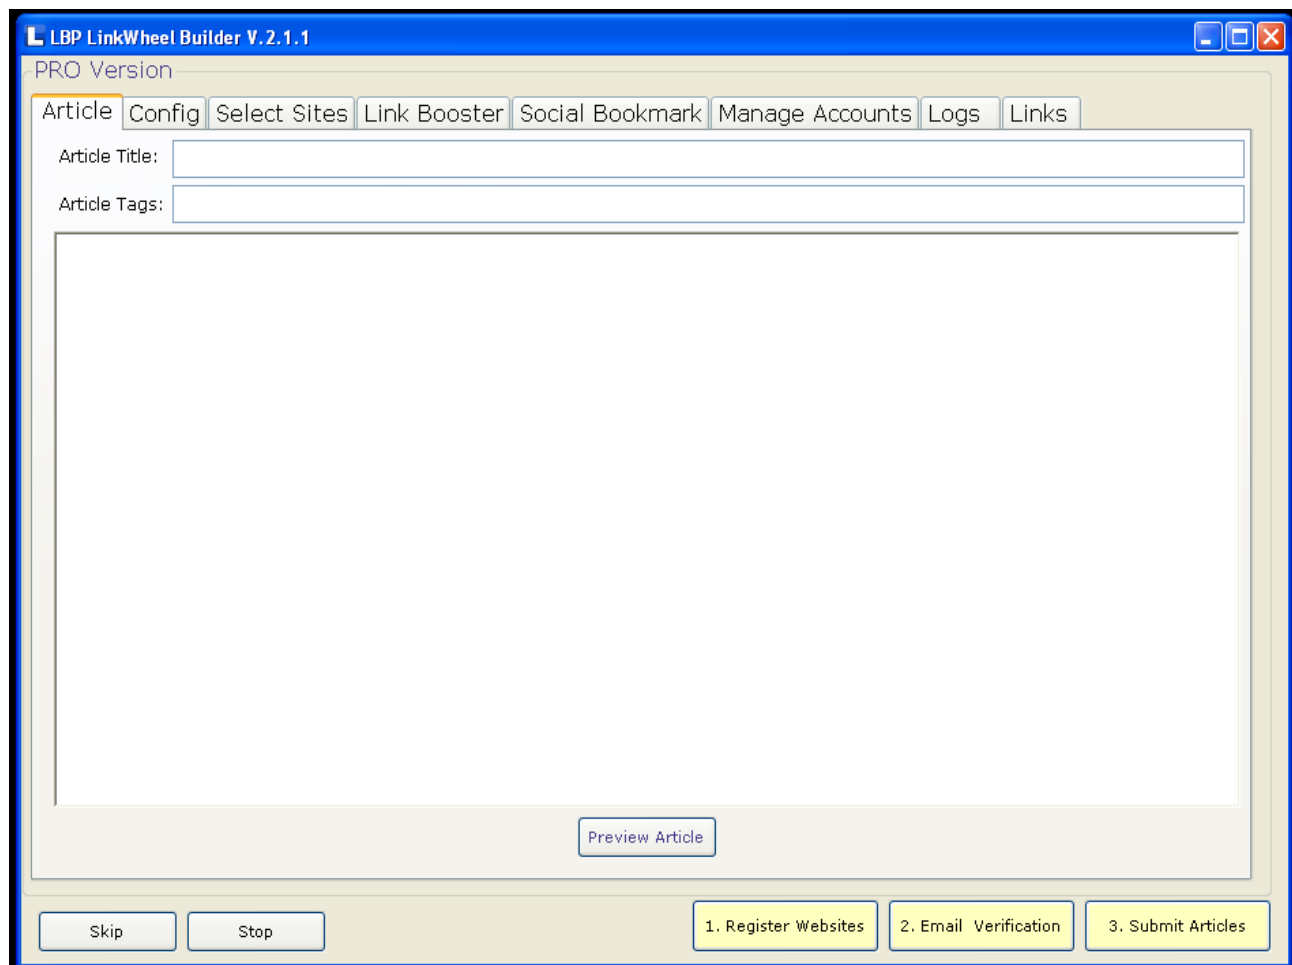

That is the Setting Up section completed.

Now you have prepared all your settings, it is time to get your articles ready and start creating some web 2.0 sites.

Automatic Website Creation:

Step 1:

Click the **Article** tab

Enter your **Article Title** (spinnable), **Article Tags** (comma separated) and **Article Content** (spinnable). You can paste your article using Ctrl+V.

This tool uses a {word1|word2|etc} article spinning syntax. For those who don't know how to use **Syntax** (Article Spinning Syntax), please watch this video: <http://www.youtube.com/watch?v=8F3z1DPfclM>

You can include your website link in the article body by putting `your anchor here` in the **Article Content** field.

IMPORTANT: You can use [The Best Spinner](#) to automatically do the article spinning process which will help you save tons of your time.

Creating Link Wheels:

You can either create the Web 2.0 properties as stand alone sites with a link pointing to your money site or you can create a Link Wheel to further harness the power of these sites, ending with one link pointing to your money site.

To create a Standard Link Wheel, simply add the **%PREVIOUSLINK%** tag some where in your article, and LBP will automatically replace this tag with the URL of the previous Web 2.0 property that you just created.

To create a Random Link Wheel with random interlinking, add the **%RANDOMLINK%** tag some where in the article and LBP will automatically replace this tag with the URL of a randomly selected Web 2.0 property that you just created.

Make sure to write the link wheel tags inside a html link, here's how:

```
<a href="%PREVIOUSLINK%">anchor text</a>
```

```
<a href="%RANDOMLINK%">anchor text</a>
```

To see the list of Web 2.0 property you recently created, click on the **Links** tab.

Step 2:

Click the **Select Sites** tab.

Click the **Select All** button to automatically select all available web 2.0 properties. Then click the **Register Websites** button to start doing the automatic registration process. You can watch the registering process by switching to **Logs** tab or your **IE Browser**.

Useful Tips:

1. Sometimes the program got stuck on some pages. Just click skip for now and you can retry the registering process for the failed sites later.
2. Sometimes you got 'This account/email address is already used' messages when you are trying to re-register to the failed sites. This mean that your user account has already been created but the program does not save it to your 'Manage Accounts' tab. You can enter it manually there.
3. You can get a lot of accounts created by only using 1 gmail, just add '.' (dot) anywhere in your email and it will be treated as a new email address by the web 2.0 sites but the confirmation link will still be

delivered to your unmodified gmail address, here's how to do that: bobsmith@gmail.com, b.obsmith@gmail.com, bo.bsmith@gmail.com, bob.smith@gmail.com, etc

Step 3:

After it's done registering, please click the **Email Verification** button. (Wait a minute or so after the last account was registered as there may be a delay in the confirmation email being sent out.)

Step 4:

Click the **Submit Articles** button to start the article submission process.

Useful Tips:

1. Sometimes the program got stuck on some pages. Just click skip for now and you can retry the submission process for the failed sites later.
2. Don't worry if you get lots of failed submission on the first attempt. This software has a very high success rate, just retry the failed submission and actually it will work the second time.
3. You can run this software in the background by clicking the minimize button. Now you can do another task on your desktop while the software doing its work :)

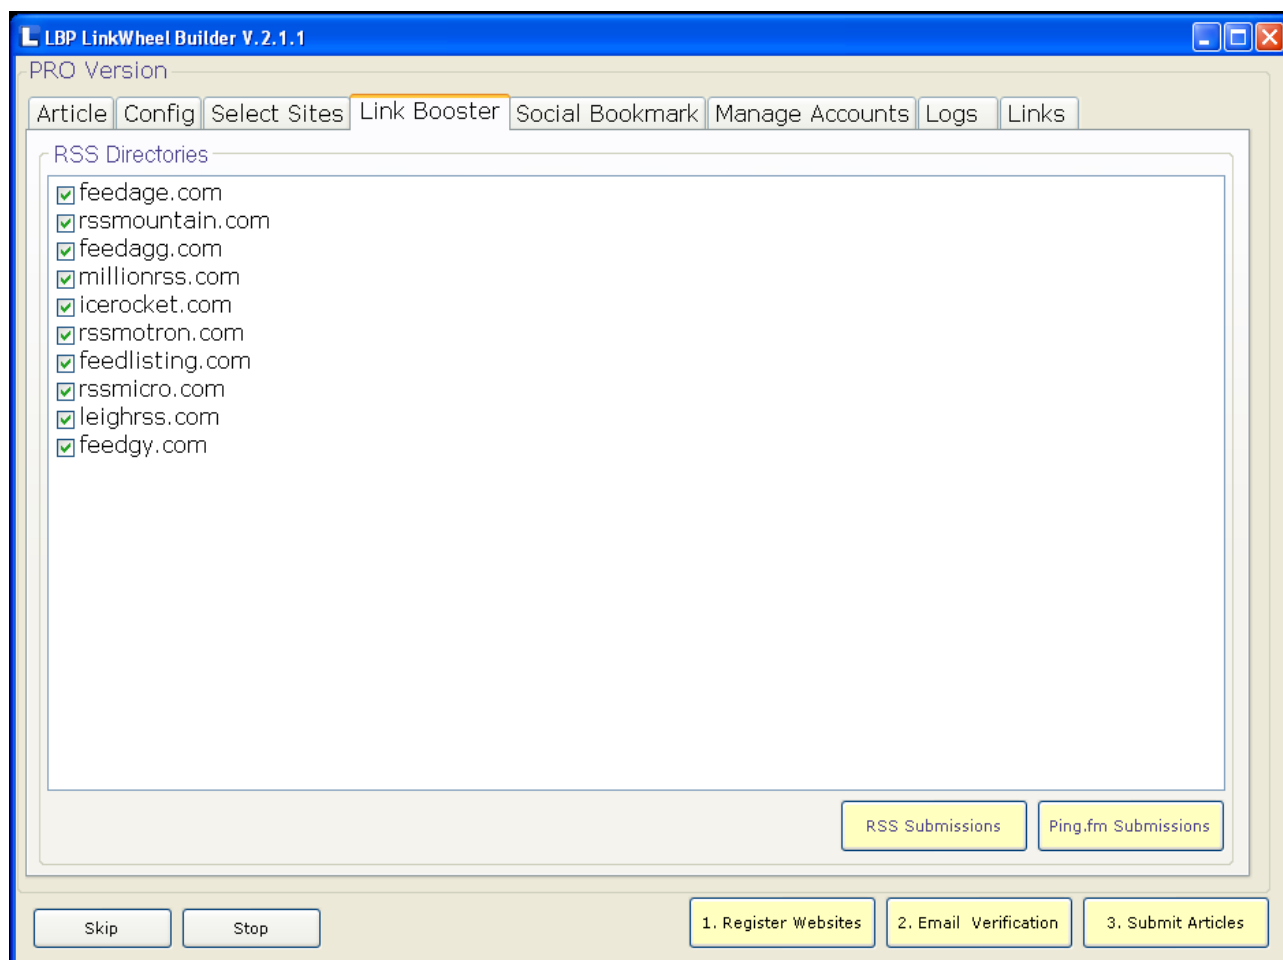

For maximum stick rate (not getting banned from the web 2.0 properties) please follow the following rules:

- **Day 1:** Register to all of the web 2.0 properties. Make sure to use proxies and clear all of your IE cookies. Don't forget to verify all of the email verification links.
- **Day 3:** Submit a high quality article without a link in the article content.
- **Day 5-7:** Start submitting your spun article with links (Don't use more than 3 links per article). Note: Don't submit more than 5 spun articles to each of your web 2.0 properties account.
- Repeat these steps to gain more links!

All the successfully completed Web 2.0 sites will be listed in the **Links tab** as full URL's. Now you have created your new Web 2.0 sites, let's go and get some back links to them so they get more Link Juice and get indexed faster and in turn ranked in the search engines.

Link Booster Method

Click the **Link Booster** tab. We will see 2 different Link Booster method being displayed, RSS Submission and Ping.fm Submission:

Automatic RSS Submission Module:

In this module, Link Builder Pro will first go to Hostmyrss and create an RSS feed from the list of URL's in the **Links** tab. The RSS Feed will be hosted at Hostmyrss (Hence the name). The identity of that feed will then be submitted to the RSS submission sites listed under 'RSS Directories' in the **Link Booster** tab. You will get 10 backlinks to each of your web 2.0 properties that you've just created.

Step 1:

Note: You must already fill the **Hostmyrss.com** details in the **Config** tab to use this functionality. Select the **Links** tab and fill in some URLs (one per line) that you want to be submitted to the RSS Feed Directories. **Note:** all of the URLs

of the Web 2.0 sites are saved automatically (after being created) into this field. So you won't need to fill in anything more if you want to ONLY submit these URLs.

Step 2:

Select the **Link Booster** tab and click the **RSS Submissions** button. Now watch your RSS feed being created and submitted automatically :)

Ping.fm Submission Module:

Step 1:

Note: You must already fill the **Ping.fm** details in the **Config** tab to use this functionality. Select the **Links** tab and fill in some URLs (one per line) that you want to be promoted to the 40+ Social Networking websites that Ping.fm submits to. **Note:** all of the URLs of the Web 2.0 sites are saved automatically (after being created) into this field. So you won't need to fill in anything more if you want to ONLY promote these URLs

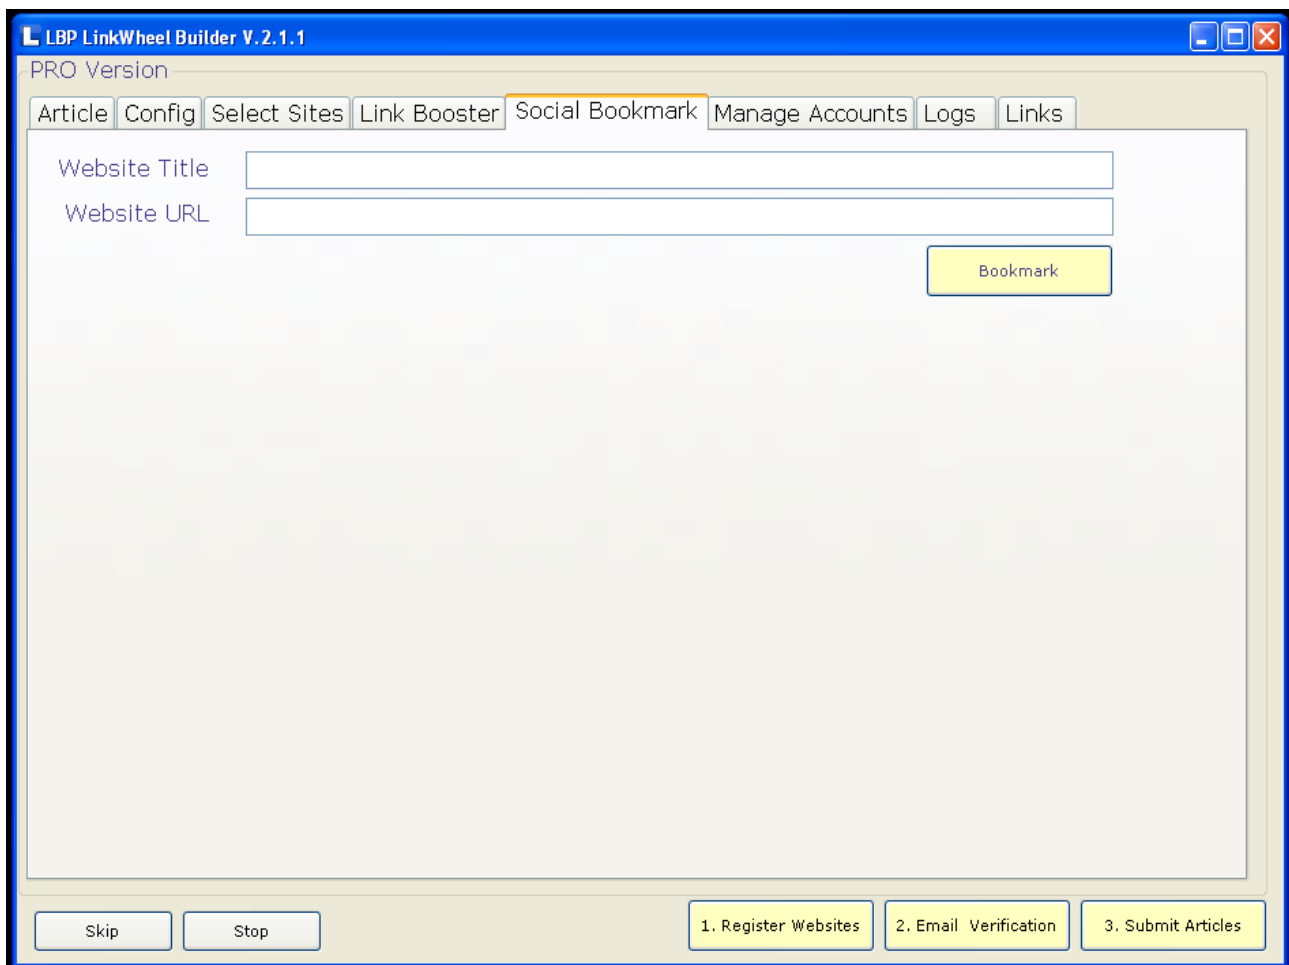

Step 2:

Select the **Link Booster** tab and click the **Ping.fm Submissions** button. Now watch your links being submitted automatically :)

Note: As all the URL's will be submitted, if you have several variations of the same article, then every one will become a separate submission to the sites held in your Ping.fm account, such as Twitter. So by submitting 10 links, 10 Tweets will also go out via Ping.fm. The results is you will get 40+ backlinks to each of your web 2.0 properties that you've just created.

Automatic Social Bookmarking:

Click the **Social Bookmark** tab.

The screenshot shows the LBP LinkWheel Builder V.2.1.1 software window. The title bar reads "LBP LinkWheel Builder V.2.1.1". Below the title bar, there is a tabbed interface with the following tabs: "Article", "Config", "Select Sites", "Link Booster", "Social Bookmark" (which is the active tab), "Manage Accounts", "Logs", and "Links". The "Social Bookmark" tab contains two text input fields: "Website Title" and "Website URL". To the right of these fields is a yellow button labeled "Bookmark". At the bottom of the window, there are three buttons: "Skip", "Stop", and a sequence of three steps: "1. Register Websites", "2. Email Verification", and "3. Submit Articles".

Step 1:

Note: You must have already filled the **Onlywire.com** details in the **Config** tab to use this functionality. Select the Social Bookmark tab and fill in your website title/keyword and your website URL.

Step 2:

Click the **Bookmark** button to automatically bookmark your site to 30+ Social Bookmarking sites using **Onlywire.com**.

Note: When you submit content to OnlyWire, the information is prepared by the OnlyWire system then routed through your computer and out to the target sites. In order for this to work, you need to install one or more of the following tools on your computer or a server on your network:

<http://www.onlywire.com/download>

Link Builder PRO

Profile Link Builder Manual

Initial Instruction:

Step 1:

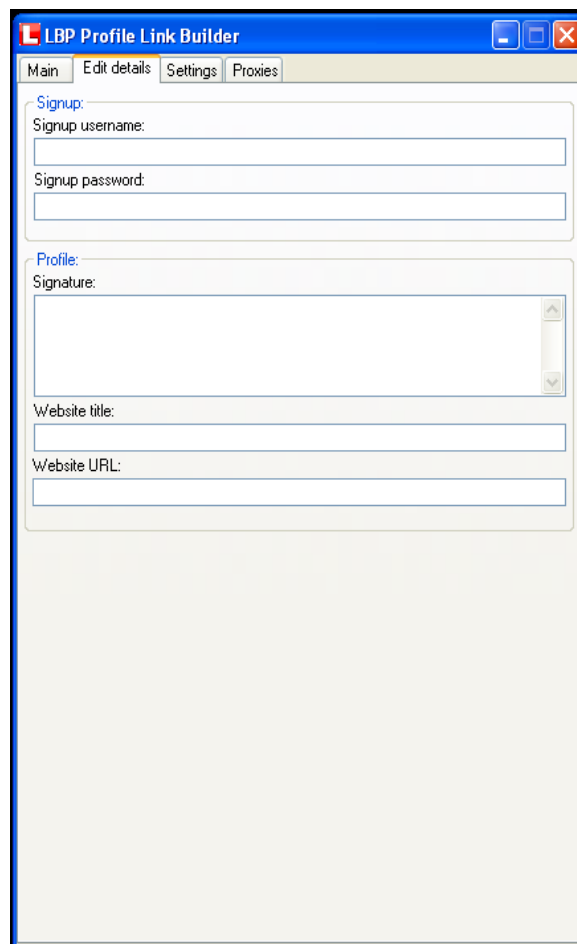

Run the **LBP Profile Link Builder.exe** to start the program.

Step 2:

Fill in your login details.

Step 3:

Select the **Edit Details** tab

The screenshot shows the 'LBP Profile Link Builder' application window. The 'Edit details' tab is selected, showing a 'Signup' section with 'Signup username:' and 'Signup password:' fields, and a 'Profile' section with a 'Signature:' text area, 'Website title:' field, and 'Website URL:' field. The 'Main' tab is also visible.

Fill in your signup username (used for forum registering process) and your signup password.

Fill in your profile signature (spinnable), website title/keyword (spinnable) and your website URL. In the profile signature box, do not use any html, but instead use **BBCode**.

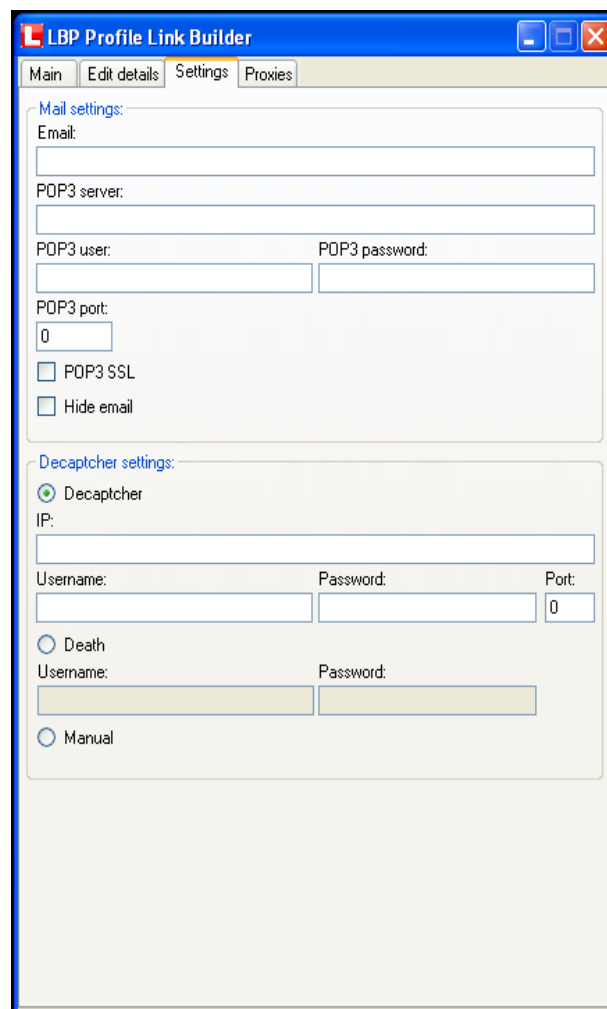

BBCode Example:

[\[url=http://www.yourwebsite.com/mypage.html\]your keyword\[/url\]](#)

Please note that some sites might have limited characters, so do not make your url or keyword too long. Also do not put more than 1 link in the profile signature.

Step 4:

Select the **Settings** tab.

The screenshot shows the 'LBP Profile Link Builder' application window with the 'Settings' tab selected. The window has four tabs: 'Main', 'Edit details', 'Settings', and 'Proxies'. The 'Settings' tab is active and contains two main sections: 'Mail settings:' and 'Decaptcher settings:'. The 'Mail settings:' section includes fields for 'Email:', 'POP3 server:', 'POP3 user:', 'POP3 password:', and 'POP3 port:' (set to 0). There are also checkboxes for 'POP3 SSL' and 'Hide email'. The 'Decaptcher settings:' section has a radio button for 'Decaptcher' (selected), followed by an 'IP:' field. Below this are fields for 'Username:', 'Password:', and 'Port:' (set to 0). There are also radio buttons for 'Death' and 'Manual', with corresponding 'Username:' and 'Password:' fields.

In the **Mail Settings** area fill in your email address and it's details. Here are the default settings for gmail for your reference:

Email: youremailaddress@gmail.com
POP3 Server: pop.gmail.com
POP3 User: youremailaddress@gmail.com
POP3 Password: your email password,
POP3 Port: 995
Enable the POP3 SSL Check Box

For Yahoo.co.uk:

Email: youremailaddress@yahoo.co.uk
POP3 Server: pop.mail.yahoo.co.uk
POP3 User: youremailaddress@yahoo.co.uk
POP3 Password: your email password,
POP3 Port: 995
Enable the POP3 SSL Check Box

Note: You can also use your own domain POP3 email address. Make sure to input the correct value in each field.

In the **Captcha Settings** area you can select 3 captcha solving options. Manual Captcha, Decaptcher and Death By Captcha. For the maximum success rate it is recommended for you to use **Decaptcher**.

Please use this info when you use Decaptcher.

IP: api.decaptcher.com

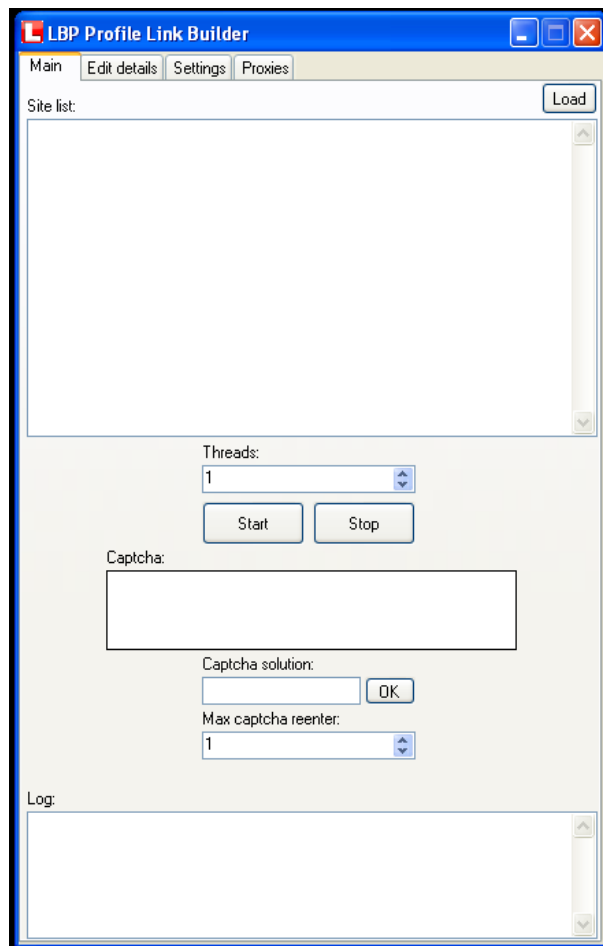

Port: your decapcher port

Username: your decaptcher username

Password: your decaptcher password

Step 5:

Select the **Main** tab.

Click the **Load** button to load any .txt file containing a forum list you have saved on your hard drive or you can just paste your forum list into the **Site List** box (note: one URL per line).

Note: You can load the default forum list by selecting **default-forum-list.txt** after you click the **Load** button.

Step 6:

Select the amount of **Threads** that you want the program to use.

Note: For maximum success rate please don't select more than 10 threads.

Step 7:

Click the **Start** button and watch your profiles being created automatically :)

Note: If you want to use proxies, please fill it in the proxies tab with the following format ip:port or ip:port@username:password.
